The World Congress of Basic & Clinical Pharmacology is coming to Scotland in 2022

Join us there for:

- Cutting edge science – from bench to bedside
- A real Scottish experience in a city full of culture and character
- A breath of fresh air amid spectacular scenery
- Making new connections from all over the world

For more information and to register your interest in attending, presenting or exhibiting, please visit www.wcp2022.org
Medical innovation and drug discovery in Scotland

Scotland is a world leader in neuroscience research, regenerative medicine, and developing treatments for cardiovascular disease, metabolic disease and oncology.

It is home to a number of centres of research excellence in pharmacology, including the University of Glasgow and the University of Edinburgh, both ranked in the world’s top 50 universities for life sciences and medicine.

Scotland boasts one of the largest collections of science companies in Europe, from global leaders to young, innovative companies with cutting-edge technologies. Its pharmaceuticals sector is worth £2.7 billion annually.

Getting to Glasgow

It is easy to travel to Glasgow by air. The city is served by three international airports, with direct flights from over 150 destinations. You can also travel by train from across the UK, including frequent direct services from London.
